

How to scan multiple pages (one pdf document):

1. Start by putting a flash-drive into the port (borrow one at the library office if you don't have one)

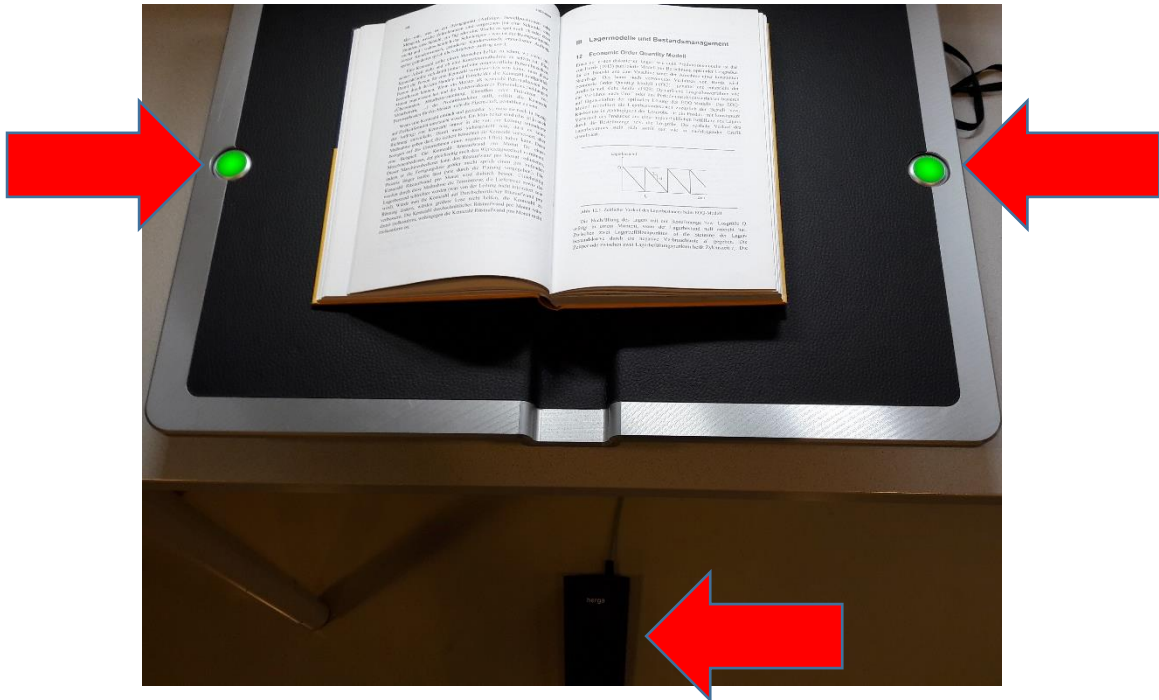

2. On the right hand side choose „Expert Modus“

3. Then, again on the right hand side, choose „Multipage“

4. Start scanning by either pressing the green buttons or the pedal on the floor

5. Once you are finished, press "Multipage Ende" on the right hand side.

6. That's it! You now have one PDF document with all the scanned pages. Don't forget your flash drive. 😊
